

Yannis Daguene

Economist / Data Analyst — Public Policy & Climate Analysis

Paris | +33 6 04 43 91 20 | yannisdaguene@gmail.com

LinkedIn | GitHub

Profile

Economist specialized in quantitative analysis applied to public policy, with a focus on climate transition and industrial dynamics. Designed a modelling framework combining input-output economics and agent-based modelling to analyze green industrial transitions. Experienced in structuring large-scale datasets, building analytical models, and producing indicators to support decision-making in multi-stakeholder environments.

Skills

Policy & Economic Analysis: Public policy analysis, climate policy, industrial policy, impact evaluation, economic modelling, sustainability analysis

Methods: Econometrics, causal inference, regression analysis, difference-in-differences, input-output modelling, scenario modelling

Programming & Data: Python (pandas, NumPy), SQL (BigQuery, PostgreSQL), R (tidyverse)

Data Management & Automation: Data cleaning, validation, multi-source reconciliation, KPI development, workflow automation (Apps Script, Python)

BI & Visualization: Power BI, dashboards, data storytelling

Languages: French (native) | English (C2) | German (B1) | Korean (B1) | Italian (B1)

Experience

Greenly — Data Analyst & Climate Operations Intern Paris, 2025

Conducted climate and sustainability analysis to support decision-making for private and institutional stakeholders. Structured and validated large-scale environmental datasets (tens of thousands of rows across purchasing, freight, and emissions data). Developed KPIs to monitor emissions trajectories and identify decarbonization levers. Automated data workflows using Python and Google Apps Script, reducing processing time from several hours to minutes. Translated quantitative findings into actionable insights for non-technical stakeholders.

Reclaim Finance (Data For Good) — Data Analyst Paris, 2025–Present

Analyzed fiscal, territorial, and climate datasets covering 36,000 municipalities to assess exposure to climate risks. Developed reproducible pipelines and analytical tools in Python to support policy-oriented analysis. Produced indicators and insights used to inform public debate and advocacy strategies. Collaborated with data engineers and analysts in a structured, multidisciplinary environment.

BioLit (Data For Good) — Data Analyst / ML Support Paris, 2025

Contributed to biodiversity monitoring through preparation and validation of image-based datasets. Supported machine learning workflows (segmentation, classification) and produced analytical outputs for end users.

Selected Policy Work

Note for Direction Générale des Entreprises (DGE)

2026

Analyzed the economic and competitive implications of the EU Carbon Border Adjustment Mechanism (CBAM). Identified structural limitations (sectoral coverage, value chain exposure, competitiveness effects) and formulated policy recommendations.

Research Note for Agence Française de Développement (AFD) 2024

Conducted literature review and economic analysis on biodiversity-related transition risks. Produced a structured synthesis identifying policy-relevant research directions.

Projects

Green Industrial Transition — Master’s Thesis 2024

Built an analytical framework combining input-output modelling and agent-based approaches to study green industrial dynamics. Processed large-scale international datasets (Eora26, Exiobase, 10–15GB) to construct transition indicators. Designed policy-relevant scenarios linking economic development, production structure, and emissions.

Machine Learning Pipeline — Academic Project 2024

Developed a full supervised learning pipeline (100k+ observations), including feature engineering, model comparison, and cross-validation.

Analytical Expertise

Input-output modelling (Leontief inverse, MRIO frameworks) applied to climate and industrial policy analysis Large-scale data processing (10–15GB datasets) and reproducible analytical pipelines Modelling of complex economic systems and network-based analysis

Education

Université Paris Dauphine 2023–2024 MSc Econometrics, International Economics & Development

Maastricht University 2020–2022 Master in European Affairs — International academic environment

Sogang University Seoul, South Korea, 2019 Exchange Semester (L3) — Economics and International Studies

Institut Catholique de Paris 2017–2020 BA Economics, Politics & Social Sciences

Additional Information

Certifications: HarvardX Data Analysis | Coursera Python for Analysis & Automation
