

Yannis Daguene

Policy & Research Analyst - development economics, causal inference and evidence synthesis

Paris | +33 6 04 43 91 20 | yannisdaguene@gmail.com

Portfolio | LinkedIn | GitHub

Profile

Early-career economist and data analyst with a strong interest in development economics, evidence-based policymaking and impact evaluation. Trained in applied econometrics, causal inference, microeconomics and development economics, with experience translating quantitative analysis and academic evidence into policy-oriented outputs. Interested in roles at the intersection of research, policy partnerships and evaluation design, with a longer-term interest in pursuing a PhD or advanced policy-research positions.

Core skills

Policy research & evidence synthesis: literature review, academic evidence synthesis, policy notes, research summaries, policy briefs, presentations, translation of technical findings for non-specialist audiences.

Impact evaluation & quantitative methods: applied econometrics, causal inference, difference-in-differences, regression analysis, panel data, microeconomics, development economics, statistical interpretation.

Data analysis & reproducibility: Python, R, Stata, SQL, Excel; data cleaning, validation, visualisation, reproducible workflows, documentation, quality checks.

Policy outreach & stakeholder work: preparation of decision-oriented materials, stakeholder communication, coordination in multidisciplinary teams, public-interest engagement, presentation of analytical findings.

Languages: French (native) | English (C2) | German (B1) | Korean (B1) | Italian (A2).

Research & policy experience

Master's Thesis and Ongoing Research Project - Green Industrial Transition Paris 2024–2026

Originally developed as a Master's thesis on ecological transition through economic complexity and the emergence of green productive sectors; currently being extended into a more operational agent-based modelling framework.

Designed a research framework linking economic complexity, productive capabilities, sectoral transformation and environmental constraints.

Worked with international datasets including input-output tables, trade data, emissions indicators and economic complexity measures.

Built indicators to analyse country-sector trajectories, embedded emissions, productive structures and potential transition pathways.

Produced visualisations and analytical outputs to make complex economic-environmental dynamics interpretable for policy-oriented discussion.

Portfolio version: daguenetyannisportfolio.netlify.app

Policy / Research Note - Biodiversity Transition Risks, AFD Research Programme Paris 2024

Produced a policy-oriented research note based on an active Agence Française de Développement research programme, as part of a graded Master's project.

Synthesised academic and institutional literature on biodiversity-related transition risks and their implications for development policy.

Translated complex research debates into structured findings, policy-relevant questions and avenues for further research.

Developed a concise written output aimed at clarifying emerging issues for public and development actors.

Policy Note - CBAM, EU ETS and Industrial Competitiveness Paris 2026

Drafted a policy note on the revision of the Carbon Border Adjustment Mechanism and its interaction with the EU Emissions Trading System.

Analysed trade-offs between carbon pricing, industrial competitiveness, exports, downstream value chains and circumvention risks.

Produced a structured policy argument connecting climate policy instruments, economic incentives and regulatory constraints.

Professional experience

Greenly - Data Analyst & Climate Operations Intern Paris 2025

Structured, cleaned and analysed client data on carbon emissions, supply chains, freight, purchased goods and products sold.

Built indicators, dashboards and presentation materials to help clients and internal teams understand emissions drivers and decarbonisation levers.

Explained methods, assumptions and limitations to non-technical stakeholders in client-facing settings.

Created analytical templates and automated workflows using Python, Excel, Google Sheets and Google Apps Script to improve data reliability and reduce manual processing.

Documented internal methodologies on carbon reporting, transport, SBTi and FLAG topics to support knowledge sharing across analyst teams.

Data For Good / Reclaim Finance - Data Analyst Paris 2025–2026

Collaborative data project on the fiscal vulnerability of French municipalities to climate risks.
Worked with data engineers and analysts to structure data pipelines, obtain additional data, validate results and document analytical choices.
Used Python and DuckDB to process long-run fiscal datasets, harmonise unstable schemas and construct indicators related to fiscal capacity and vulnerability.
Contributed to a project workflow requiring coordination, quality control, transparent documentation and communication between technical and non-technical contributors.

BioLit / Data For Good - Data Analyst & ML Support	Paris	2025
---	-------	------

Supported a biodiversity monitoring project based on user-submitted images.
Cleaned, validated and structured image-related datasets to support segmentation and classification workflows.
Produced analytical visualisations to help technical and domain teams interpret data quality and project outputs.

Education

Université Paris Dauphine - PSL	Paris	2023–2024
--	-------	-----------

Master’s in Econometrics, International Economics & Development
Relevant coursework: applied econometrics, causal inference, development economics, microeconomics, environmental economics, policy evaluation, quantitative methods.

Maastricht University	Maastricht	2020–2022
------------------------------	------------	-----------

Master’s in European Affairs
Relevant coursework: European public policy, political economy, governance, research methods, quantitative methods.

Institut Catholique de Paris	Paris	2017–2020
-------------------------------------	-------	-----------

Bachelor’s in Economics, Politics & Social Sciences

Policy & civic engagement

Policy-oriented engagement through Data For Good and civic activities, including analytical work, coordination and written outputs on public-interest issues. Experience communicating policy ideas, contributing to collective projects and working with multidisciplinary teams.

Certifications

HarvardX - Data Analysis: R, statistics and visualisation	2023
Coursera - Python for analysis and automation	2025
