

Yannis Daguene

Climate policy analyst — carbon pricing, data analysis & environmental economics

Paris | +33 6 04 43 91 20 | yannisdaguene@gmail.com

LinkedIn

Profile

Economist and data analyst specialised in climate policy, environmental economics and quantitative analysis. Experience producing policy-oriented research on carbon pricing instruments, industrial decarbonisation and climate-related data, combining desk research, statistical analysis, visualisation and concise written outputs. Strong interest in international climate policy, market-based mechanisms and the role of carbon pricing in supporting effective and economically sound mitigation strategies.

Professional experience

Greenly — Climate Data Analyst Paris 2025

Analysed corporate carbon data across multiple sectors, including retail, agri-food, steel, electronics and furniture.

Worked with emissions data, activity data and emission factor databases to quantify decarbonisation levers and support climate strategy discussions.

Structured, cleaned and validated heterogeneous datasets from Excel, CSV files, internal databases and external sources.

Developed Python and Google Apps Script workflows to automate data preparation, quality checks and analytical outputs.

Produced client-facing reports, dashboards and presentations explaining carbon accounting results, methodological assumptions and sectoral drivers.

Contributed to internal methodological documentation on climate standards and decarbonisation frameworks, including GHG Protocol, SBTi and FLAG-related topics.

Reclaim Finance — Data Analyst Paris 2025–Present

Project conducted as part of a Data For Good collaboration.

Analysed territorial, fiscal and climate-related datasets to assess the budgetary implications of climate adaptation for French municipalities.

Processed large-scale longitudinal public datasets covering 36 000 municipalities and several decades of observations.

Built indicators linking climate vulnerability, insurance costs and local fiscal capacity.

Implemented reproducible data workflows using Python, DuckDB and notebooks to structure and document the analysis.

Produced quantitative outputs and visualisations intended to support policy-oriented advocacy and public decision-making.

Selected policy and research work

Policy note — Revision of the EU Carbon Border Adjustment Mechanism 2026

Prepared a policy note for a recruitment process at the French Directorate General for Enterprise.

Analysed the revision of the EU Carbon Border Adjustment Mechanism, its interaction with the EU Emissions Trading System and the phase-out of free allowances.

Discussed carbon leakage, industrial competitiveness, export exposure, downstream value-chain effects and risks of circumvention.

Identified the need to combine carbon pricing with complementary industrial and trade policy instruments.

Produced a concise ministerial-style note and accompanying slides translating technical issues into policy-relevant conclusions.

Master's thesis — Green industrial transition and embodied emissions 2024

Developed a quantitative framework to analyse how productive capabilities shape countries' ability to develop green industrial sectors.

Mobilised multi-regional input-output databases, including EORA26 and EXIOBASE, to study production networks, emissions and sectoral exposure.

Built indicators of carbon intensity, value-chain position and productive capability using large-scale economic and environmental datasets.

Produced visualisations of sectoral dynamics, embodied emissions and cross-country transition patterns. Combined environmental economics, complexity economics and policy analysis to study decarbonisation pathways.

Research note for the Agence Française de Développement 2024

Conducted a literature-based analysis on biodiversity-related transition risks and implications for development policy.

Synthesised academic and institutional sources into a structured policy-oriented document.

Identified prospective research and policy questions at the intersection of biodiversity, finance and public action.

Skills

Climate and environmental policy : carbon pricing, EU ETS, CBAM, industrial decarbonisation, carbon accounting, transition risks, biodiversity-related policy issues.

Quantitative analysis : descriptive statistics, econometrics, regressions, causal inference, indicator construction, principal component analysis, data visualisation.

Data tools : Python (pandas, statsmodels), R (tidyverse, ggplot2), SQL (BigQuery, PostgreSQL, DuckDB), Excel, Google Apps Script, Git.

Research and communication : desk research, literature review, policy notes, analytical briefs, slide decks, methodological documentation, communication for non-technical audiences.

Education

Université Paris Dauphine 2023–2024

Master 2 Econometrics, International Economics & Development

Relevant coursework : advanced econometrics, environmental economics, policy evaluation, international economics, quantitative methods.

Maastricht University 2020–2022

Master in European Affairs

Relevant coursework : European public policy, political economy, EU governance, international policy analysis.

Institut Catholique de Paris 2017–2020

BA in Economics, Politics & Social Sciences
